PROFILE

I have many years of experience in GIS research and development, and have a strong interest in graphics, mainly related to the fields of physically based rendering, 3D GIS, virtual earth, and differentiable rendering.

EMPLOYMENT

Engineer/Department manager, R&D Department, SuperMap, Beijing/Chengdu, China   Jul. 2006 - Jun. 2018

- Virtual Earth: I am responsible for the development of new WebGL products, including the pre-research of global imaging and terrain, models and other modules, the coordination and cooperation of cross-product teams, I personally realized the generation of massive 3D data (oblique photography, point cloud, BIM), and the (instanced)rendering and dynamic data visualization in the Browser.
- Map Module: I am responsible for the 2D map module, including rendering for vector, raster, and other multi-source data in cross-platform (Windows, Linux, Android, Unix), and the realization of rendering styles such as thematic maps and symbols
